 By choosing a particular adaptive filter structure, one specifies the number and type of parameters that can be adjusted. The adaptive algorithm used to update the parameter values of the system can

[Adaptive filter - Wikipedia](#)

An adaptive filter is a system with a linear filter that has a transfer function controlled by variable parameters and a means to adjust those parameters according to an optimization algorithm. Because of the complexity of the optimization algorithms, almost all adaptive filters are digital filters .

Adaptive Noise Cancellation

This Project involves the study of the principles of Adaptive Noise Cancellation (ANC) and its Applications. Adaptive noise Cancellation is an alternative technique of estimating signals corrupted by additive noise or interference. Its advantage lies in that, with no a priori estimates of signal or noise, levels of noise rejection are attainable that would be difficult or impossible to achieve
Adaptive Backstepping Tuning Functions Control Design for ...

Abstract In this paper, an adaptive backstepping control design with tuning functions and K-filters for robot manipulators is developed. A stronger stability and convergence performance of the designed control in comparison with backstepping observer is achieved despite the presence of disturbances, parameter uncertainties, system
