The powerful number crunching capability of these tools
enables plastic analysis and design to be performed for
structures of virtually any size. The amount of
computation required for structural analysis is largely
dependent on the degree of statical indeterminacy of the
structure. Structural analysis, whether linear or nonlinear,
is mostly based on matrix formulations to handle the
enormous amount of numerical data and computations.
Matrix formulations are suitable for computer

Plastic Analysis and Design of Steel Structures - 1st Edition

This new book sets out a method for carrying out plastic analysis of complex structures without the need for specialist tools. The book provides an introduction to the use of linear programming techniques for plastic analysis. This powerful and advanced method for plastic analysis is important in an automated computational environment, in particular for non-linear structural analysis.
