[Proteoglycan - Wikipedia](#)

Proteoglycans are proteins that are heavily glycosylated. The basic proteoglycan unit consists of a "core protein" with one or more covalently attached glycosaminoglycan (GAG) chain(s). The point of attachment is a serine (Ser) residue to which the glycosaminoglycan is joined through a tetrasaccharide bridge (e.g. chondroitin sulfate-GlcA-Gal

[2018 Proteoglycans Conference GRC](#)

Proteoglycans are being found to play important roles across an increasingly broad range of biological systems and disease processes. This is underpinned by their highly regulated production and turnover, the inherent complexity of their structure and organization in tissues, and their diverse interactions with extracellular signaling molecules.

[Heparan sulfate proteoglycans: structure, protein ...](#)

ABSTRACT. Heparan sulfate proteoglycans are ubiquitously found at the cell surface and extracellular matrix in all the animal species. This review will focus on the structural characteristics of the heparan sulfate proteoglycans related to protein interactions leading to cell signaling.

[Glycosaminoglycans and Proteoglycans | Sigma-Aldrich](#)

Structures. Glycosaminoglycans (GAGs) are large linear polysaccharides constructed of repeating disaccharide units with the primary configurations containing an amino sugar (either GlcNAc or GalNAc) and an uronic acid (either glucuronic acid and/or iduronic acid).

[Fibronectin - Wikipedia](#)

Fibronectin is a high-molecular weight (~440kDa) glycoprotein of the extracellular matrix that binds to membrane-spanning receptor proteins called integrins. Similar to integrins, fibronectin binds extracellular matrix components such as collagen, fibrin, and heparan sulfate proteoglycans (e.g. syndecans).

[The Medical Biochemistry Page](#)

The Medical Biochemistry Page is a portal for the understanding of biochemical, metabolic, and physiological processes with an emphasis on medical relevance.

[Extracellular matrix: review of its roles in acute and ...](#)

Abstract. The extracellular matrix (ECM) is the largest component of the dermal skin layer and the synthesis of ECM is a key feature of wound healing, especially when there has been a significant loss of tissue that precludes closure by primary intention.

Welcome to Biosupplies. Providing Products for Botanical
Microscopists and Polysaccharide Enzymologists.

Biosupplies is an Australian company managed by plant
scientists specialising in providing reagents for detection,
characterisation, and quantification of polysaccharides and
proteoglycans from plant

[Osteoarthritis - Degenerative Joint Disease | Pain...](#)

Osteoarthritis Basics: The Joint and Its Parts. A joint is the
point where two or more bones are connected. With a few
exceptions (in the skull and pelvis, for example), joints are
designed to allow movement between the bones and to
absorb shock from movements like walking or repetitive
motions.

[Cartilage Types and Function | Bone and Spine](#)

Cartilage is a connective tissue found in many areas in the
bodies of including the joints between bones, the rib cage,
the ear, the nose, the bronchial tubes, and the intervertebral
discs.

[8 Healing Remedies to Repair Joints - Home Cures That Work](#)

Natural Anti-inflammatories. There is a way to decrease
the inflammation without preventing healing. These joint
supplements have been tested in multiple ways with
positive track records.

[Aloe Ferox FAQ](#)

So what is aloe ferox, anyway? Aloe Ferox is a plant
native to South Africa. It's similar to Aloe Vera, but has
many times more nutritional and medicinal value than aloe
vera.

[Connective Tissue Study Guide - slimed.edu](#)

Macrophages remove and digest the by-products of both
bacterial warfare and normal growth and degeneration.

Resting macrophages are difficult to recognize reliably by light microscopy, at least in routine preparations, because they lack conspicuous distinguishing characteristics.

[**AHCC Uses, Benefits & Dosage - Drugs.com Herbal Database**](#)

Most of the medical literature documents the use of AHCC (active hexose correlated compound) as an immunomodulatory agent and its efficacy in therapy for cancer and various infections; however, there is limited information to support the use of this product for any condition.
