Stereolithography - Wikipedia

Stereolithography (SLA or SL; also known as stereolithography apparatus, optical fabrication, photo-solidification, or resin printing) is a form of 3D printing technology used for creating models, prototypes, patterns, and production parts in a layer by layer fashion using photochemical processes by which light causes chemical monomers to link.

What is Stereolithography? | 3D Printing

Stereolithography is the oldest method of 3D printing, or additive manufacturing, by which a laser focuses on a vat of liquid plastic to draw out the 3D model layer by layer. Stereolithography | SLA | 3D Printing at Materialise. Stereolithography (SLA) is a laser-based 3D printing technology that uses UV-sensitive liquid resins. With our patented Mammoth Stereolithography machines, we can print large 3D models up to 2 meters long in a single piece.
