[Double-crested cormorant - Wikipedia](#)

The double-crested cormorant (*Phalacrocorax auritus*) is a member of the cormorant family of seabirds. It occurs along inland waterways as well as in coastal areas, and is widely distributed across North America , from the Aleutian Islands in Alaska down to Florida and Mexico .

[Double-crested Cormorant Overview, All About Birds ...](#)

The gangly Double-crested Cormorant is a prehistoric-looking, matte-black fishing bird with yellow-orange facial skin. Though they look like a combination of a goose and a loon, they are relatives of frigatebirds and boobies and are a common sight around fresh and salt water across North America perhaps attracting the most attention when they

[Double-crested Cormorant | Audubon Field Guide](#)

The Double-crested (which rarely looks noticeably crested in the field) is the most generally distributed cormorant in North America, and the only one likely to be seen inland in most areas. Conservation status:

[Double-crested Cormorant - Introduction | Birds of North ...](#)

The Double-crested Cormorant is the most numerous and most widely distributed species of the 6 North American cormorants. In the U.S. and Canada, it is the only cormorant to occur in large numbers in the interior as well as on the coasts, and it is more frequently cited than the others as conflicting with human interests in fisheries.

[Double-crested Cormorant | Birder's Journey](#)

The Double-crested Cormorant is the most common Cormorant in North America (Audubon). So where are their double crests, you ask?? Oddly enough, the bird is so named because of two tiny, barely noticeable, tufts of black feathers that appear on its head ONLY during breeding season. Speaking of 'tufts', this fellow (not in breeding plumage

[Double-crested Cormorant | My Bird of the Day](#)

Double-crested Cormorant Posted on June 25, 2012 by Peter T I have sometimes wondered what it takes for some of our more ho-hum birds to make the kind of impression that would qualify it as Bird of the Day status.

[Double-crested Cormorant Life History, All About Birds ...](#)

The gangly Double-crested Cormorant is a prehistoric-looking, matte-black fishing bird with yellow-orange facial skin. Though they look like a combination of a goose and a loon, they are relatives of frigatebirds and boobies and are a common sight around fresh and salt water across North America perhaps attracting the most attention when they
