[real analysis - Prove that if an integral is 0, the ...](#) Prove that if an integral is 0, the function is 0 across that interval (for  $f(x) \geq 0$ ) No integral of any subinterval of  $[a,b]$  can be less than 0, by definition. It follows that none can be greater than 0, since that would result in a positive value for the integral of  $[a,b]$ . Therefore,  $f(x) = 0$  for all  $[a,b]$ .
