[What are The Outer Planets of the Solar System? - Universe ...](#)

Astronomers have divided the eight planets of our solar system into the inner planets and the outer planets. The 4 inner planets are the closest to the Sun, and the outer planets are the other.

[Gas Giants: Facts About the Outer Planets - Space.com](#)

The solar system's outer planets Jupiter, Saturn, Uranus and Neptune are mainly giant balls of gas much larger than Earth. Gas Giants: Facts About the Outer Planets

[Outer planets - Wikipedia](#)

The outer planets are those planets in the Solar System beyond the asteroid belt, and hence refers to the gas giants and ice giants, which are in order of their distance from the Sun: Jupiter is the largest planet in the Solar System. It has four very large satellites (moons). Saturn is the second-largest planet, with a large and bright ring system. Uranus is the third-largest planet and the

[POSITIONS FOR THE OUTER PLANETS AND MANY OF THEIR ...](#)

each coordinate are smaller than for the planets, and the agreement is usually better than for 0A.03 0A.07 the planetary satellites. In particular, the new JPL ephemerides for outer satellites of Jupiter (Himalia,

[Gas Giant Facts \(The Outer Planets\)](#)

Gas giants are large planets that contain more than 10 times the mass of Earth, they are also known as the Jovian or Outer Planets. Their compositions are mostly gases, such as hydrogen, and small amounts of rocky material (mostly at their cores). The four gas giants in our solar system are Jupiter, Saturn, Uranus, []
