What makes this possible is the wide use of concrete as a construction material. Its primary component materials are aggregate, cement, and water, with aggregate constituting approximately 70% of the total volume. The Earth's crust is composed of rocks that are the raw materials for aggregate. Water, when seawater is included, is the most commonly available globally circulating substance on

[**What is sustainable use? What are some examples? - Quora**](#)

Sustainable use is the process where a resource or a service is used in a way that it can be maintained sustainably, year-in, year-out. That doesn't mean that we have to be confident that the resource can last until the heat death of the universe.
