Some of the desirable properties of a drug for transdermal delivery: 1. The drug molecule should possess an adequate solubility in oil and water. 2. The drug should have a

molecular weight less than approximately 1000 daltons. 3. The drug should have low melting point. 4. The drug molecule would require a balanced partition coefficient to penetrate the stratum corneum. 2. POLYMER MATRIX These

#### Transdermal patches: the emerging mode of drug delivery ...

Factors affecting transdermal drug delivery. Human skin is an efficient protective barrier. Choosing a candidate drug that is suitable for making transdermal formulations can be difficult.

#### Transdermal patch - Wikipedia

A transdermal patch is a medicated adhesive patch that is placed on the skin to deliver a specific dose of medication through the skin and into the bloodstream. Often, this promotes healing to an injured area of the body. An advantage of a transdermal drug delivery route over other types of medication delivery such as oral, topical, intravenous, intramuscular, etc. is that the patch provides a controlled release of the medication into the patient, usually through either a porous membrane coverin
